Baghouse Project Update

Moran Iron Works is near completion of the Unit 2 Baghouse project, which was started in early October of 2010. The fabrication and assembly within our shop has been completed with the positioning and welding of the lifting lugs. This month we are transporting the pieces, ranging between 7,000 pounds to over 127,000 pounds, down our high wire corridor to our deep water port. Due to the enormous size of the baghouse units, some fabrication is required once they reach the port. MIW welders will be on site at the deep water port to complete pre-barging fabrication and assist in barge loading each piece.

Each module is placed on the barge with specific purpose, and our project managers spend a significant amount of time establishing the precise module placement which will decrease handling time and when unloaded, it will increase production and safety.

As usual, MIW staff will be on the job site to witness the unloading when the barges reach their destination.

After the completion of Unit 2, our shop floors will be filling with materials for the fabrication and assembly of Unit 3. The Unit 3 baghouse project is somewhat larger than the Unit 2 project and fabrication is scheduled to start this summer.

Bi-Fold Door Addition

This year Moran has put numerous man hours into the expansion of our work zones. Some items on the list for 2011 is the addition of 26,000 square feet to our shop, the Osh Kosh 911 military transporter that was recently added to our trucking fleet, and now the first of five 30'x40' foot bi-fold hanger doors that will accommodate our ever increasing sized fabrications.

From The Estimating Department

Moran Iron Works is resolute in keeping our shop full, and in doing so is currently bidding on multiple spray dryer absorbers, which are in excess of 60' in diameter and 80' tall with a round cone style hopper at the bottom.

Our estimating department is also very busy quoting numerous medium to large scale projects for various industries.

New Project
 Manager

MIW welcomes new employee, John Kreft, to our team. John has joined the Project Management department and is settling in quickly to the fast paced work environment at MIW.

John resides in the Grand Lake area, where he is perfectly set up for his favorite hobby, sailing. During his off time you may find John out enjoying the winds of Grand Lake or competing with the 26' Nacra sailboat and his racing team.

John joins us with an degree in drafting and design
